SUMMARY

Full-stack engineer with 3+ years of professional experience shipping production software. Most recently, as lead software engineer, I designed and built a multi-tenant SaaS ERP (20 client companies) end to end on **.NET 10, Next.js and PostgreSQL** — from architecture and secure API design to cloud infrastructure, CI/CD, observability and customer-facing features. Strong in backend reliability (idempotent webhooks, outbox, background jobs), security (RBAC, 2FA, row-level security) and third-party integrations. Fluent **English C1 (EF SET certified)**, comfortable working async with distributed teams.

TECHNICAL SKILLS

Backend: C#, .NET 10, ASP.NET Core Web API, Entity Framework Core, Node.js, Fastify, REST, SignalR / WebSockets, webhooks, background workers

Frontend: TypeScript, React 19, Next.js 16, Tailwind CSS, Vite, React Native · **APIs:** OpenAI, Asaas, Resend, Telnyx, Google OR-Tools

Data & Cloud: PostgreSQL (Neon), Redis, SQL Server, MySQL, Azure App Service, Vercel, Cloudflare Workers / R2, Docker, GitHub Actions

Quality & Security: xUnit, Vitest, Playwright, Sentry, Application Insights, OWASP Top 10, RBAC, 2FA, PostgreSQL RLS, GDPR / LGPD

EXPERIENCE

Lead Software Engineer (Full-Stack) — Nov 2025 – Oct 2026
ICone — Gelato Intelligence · Remote
SaaS ERP for artisan and industrial gelato producers (recipe balancing, formula reverse-engineering, nutrition labeling, subscriptions, B2B marketplace).

- Architected and built the platform from scratch — used by 20 companies, 500+ ingredients and 100+ recipes — on .NET 10 / ASP.NET Core / EF Core APIs, PostgreSQL + Redis, and Next.js 16 / React 19 / TypeScript frontends with real-time updates via SignalR.
- Led the production database migration from Supabase to Neon with zero data loss, and moved backend hosting from an Azure VM to Azure App Service with automated GitHub Actions deployments.
- Built security in from day one — RBAC, 2FA, PostgreSQL row-level security for tenant isolation, CSRF protection, rate limiting, server-side sessions — and ran an OWASP-based security audit of the platform.
- Designed reliable payment and event flows (idempotent webhooks, transactional outbox, background workers) integrating payments, email, SMS, shipping and OpenAI; restored a business-critical flow during a payment-gateway incident and hardened it against recurrence.
- Implemented a recipe-optimization engine with Google OR-Tools (SCIP solver) and automated technical/nutrition PDF generation with QuestPDF.
- Owned CI/CD, automated testing (xUnit, Vitest, Playwright), multi-environment deploys and observability (Sentry, Application Insights); mentored two team members on code quality and delivery.

Full-Stack Developer — Integrations — Jul 2025 – Dec 2025
BWT Operadora · Curitiba, Brazil · Contract

- Built an internal travel-order management system and operational tools with React, Node.js, Python, PostgreSQL and MySQL.
- Integrated the InfoTravels API and built scraping and automation workflows that cut manual validation work for the operations team.

IT Assistant (IT Intern until Dec 2023) — May 2023 – Jul 2025
Witzenmann Group (German multinational) · Pinhais, Brazil

- Automated internal processes with PHP and SQL scripts on MySQL and SQL Server.
- Maintained databases and internal systems, supported TOTVS Protheus ERP operations, managed user access and documented technical processes.

EDUCATION

PUCPR (Brazil) — Associate Degree (Tecnólogo) in Systems Analysis and Development — 2024 – 2026
IFPR (Brazil) — Technical Diploma in Computer Science — 2020 – 2023
